

Supply Train

elearning for sustainable supply chains

Supply Train

Supply Train is a flexible elearning environment that will increase factories' understanding of best practices.

It is built inside a three dimensional virtual factory, using real life examples and case studies.

This offers a unique opportunity to engage factory managers and workers in a way that promotes understanding and learning through interaction and visual demonstration.

The concept.....

Supply Train

has been developed to increase factories' awareness in areas relating to ethics and sustainability. It can be adapted for different sectors (e.g. textile, food, homeware) and either cover broad topics (e.g. ethics, environment, productivity), or focus on specific issues (e.g. safety, employee consultation).

Operational model

General Features

- Development costs (or costs of modifying the generic module) underwritten by the retailer. Zero cost to the retailer, providing sufficient suppliers buy licenses to cover development costs
- Cost approximately £100 per factory
- Module is marketed and endorsed by the retailer
- Completion tracked and reported centrally on LMS. Retailer has administrative rights for reporting and tracking.

Commercial model

There are two commercial options available :

Model 1 – suitable for small numbers of supplier factories (less than 300)

- Generic module, available in English, + limited translations
- Option for limited retailer branding and text changes
- Other language versions can be created
- Any development costs underwritten by the retailer

Model 2 – suitable for larger numbers of suppliers

- Fully customisable in terms of factory environment, topics and content
- Development costs underwritten by the retailer, equivalent to 300-400 licenses
- Minimal input needed from retailer, content built by sustainability experts to an agreed brief and approved by the retailer at key development stages
